Who we meet

In portable four-gas deals we most often compete against two vendors:

- Corvane Safety, with the Corvane GX4. It is the price leader in UK utilities and Dutch contractors, and is usually sold through large safety distributors.
- Brightline Detection, with the BL-Quad. It is strong in North American oil and gas and is gaining ground in Malaysia through a regional distributor.

Our answer in these deals is the Halcyon HX-210 (Zone 0, four-gas) or the HX-220 (connected four-gas with Bluetooth LE, GPS and man-down). For single-gas H2S work, lead with the HX-200.

Head-to-head comparison

Attribute | Halcyon HX-210 | Halcyon HX-220 | Corvane GX4 | Brightline BL-Quad

Hazardous area rating | Zone 0, Ex ia IIC T4 Ga | Zone 1, Ex ib IIC T4 Gb | Zone 1, Ex ib IIC

T4 Gb | Zone 0, Ex ia IIC T4 Ga

Runtime | 14 h | 22 h | 16 h | 12 h

Operating temperature | -20 to +55 C | -40 to +55 C | -20 to +50 C | -20 to +50 C

Ingress | IP67 | IP67 | IP65 | IP67

Datalog at 1-min interval | 90 days | 180 days | 30 days | 60 days

Calibration interval | 120 days | 150 days | 180 days | 90 days

Connectivity | USB-C, HX-DOCK-4 | Bluetooth LE 5.0, GPS, man-down | USB only | Bluetooth, no GPS

Instrument warranty | 36 months (registered) | 36 months (registered) | 24 months | 24 months

UK list price, starter kit | GBP 1,150 | GBP 1,690 | about GBP 990 | about GBP 1,390

Competitor figures come from public data sheets and field reports collected up to June 2025. Check them before quoting in a customer-facing document.

Why we win

- Total cost of ownership. Our 36-month instrument warranty (with product registration within 90 days) and 24-month warranty on most sensors cut replacement spend. Under sup-warranty-terms-2025 the O2 sensor carries 18 months.
- Docking. HX-DOCK-4 runs automatic bump tests and calibration for four instruments at once, and records results for audit.
- Cold weather. The HX-220 works down to -40 C, well below both competitors.
- Connected safety. On lone-worker sites the HX-220 man-down alarm and GPS position replace a separate lone-worker device.

Landmines to set

- "Ask them what their confined-space entry procedure says about Zone 0." Corvane GX4 is Zone 1 only.
- "How many days of datalog do you need for an incident investigation?" The GX4 keeps 30 days, the HX-220 keeps 180.
- "What does a replacement sensor cost after the warranty ends?" Brightline sensor pricing is typically 20 to 30 percent higher than ours.

Critical guidance: Zone 0 work

The HX-220 is certified II 2G Ex ib IIC T4 Gb, which is Zone 1 only. It must not be proposed for Zone 0 areas such as the inside of tanks, vessels and sewers during entry. If the customer needs Zone 0, recommend the HX-210 (II 1G Ex ia IIC T4 Ga). If they also want connectivity, propose a mixed fleet: HX-210 for entrants and HX-220 for attendants and area patrols. Brightline will attack us on this point, because the BL-Quad is Zone 0 and has Bluetooth. Answer with runtime (HX-210 14 h against 12 h), our longer warranty and the dock.

The HX-200 is certified for gas group IIB only (Ex ib IIB T4 Gb). Do not propose it where hydrogen or acetylene may be present. Those gases fall in group IIC.

Objection handling

Objection | Response

"Corvane is 15% cheaper." | Compare over three years. Include sensor replacements, the 24-month versus 36-month warranty, and calibration gas used. The HX-210's 120-day interval uses fewer MI-CAL-Q4-B cylinders than 90-day competitors.

"Brightline has Zone 0 and Bluetooth in one unit." | True. Position a mixed HX-210/HX-220 fleet and lead on the HX-220's 22 h runtime and -40 C rating for the patrol role.

"Your calibration interval went from 180 to 120 days." | The HX-210 calibration procedure v2 (May 2025) moved to 25% LEL span gas and 120 days after field drift data. Present it as a quality improvement. Brightline still needs 90 days.

"We already have Corvane docks." | Offer a trade-in on competitor docks through the deal desk. This counts toward the total discount under the approval matrix.

Discounting guidance

Keep competitive discounts within 20% where possible. Anything above 20% needs VP Sales approval under sales-discount-approval-matrix. Record the competitor's name in the Atlas opportunity so win/loss reporting stays accurate.
